

PROFESSIONAL SUMMARY

- **Sr. Software Engineer** with 7+ **years** of experience in Analysis, Design, Development, Testing and Implementation of Enterprise Client/Server and Distributed Applications across the entire Software Development Life Cycle using **Java** and **J2EE** Technologies.
- Worked in the challenging environments by following different methodologies like **Agile/Scrum**, **Test Driven Development** and **Waterfall model**.
- Experience in both functional and object oriented languages like **C** and **Java**. Using **Java/J2EE** and other frameworks developed core modules in cross-platform applications.
- Utilized **Java 8** features like Lambda expressions and Stream API for Bulk data operations on Collections which would increase the performance of the Application.
- Proficient in applying design patterns like **MVC**, **Singleton**, **Facade**, **Service Locator**, **Adapter**, **Visitor**, **Observer**, **Decorator**, **Front Controller**, **Data Access Object (DAO)**.
- Worked extensively with **Core Java**, **Multithreading**, **Transactions**, **Exception Handling** and **Collections**.
- Used Spring Transactions in the application and developed Session beans for the business logic and used **Spring Framework** for Dependency Injection and integrated with **Hibernate DAOs**.
- Worked with various frameworks in spring such as **Spring AOP**, **Spring transaction Management**, **Spring Data**, **Spring Batch**, **Spring Boot** and **Spring Cloud**.
- Involved in writing **Spring Configuration** XML file that contains declarations and dependent objects and used **Hibernate** framework in persistence layer for mapping an object-oriented model to a relational database.
- Solid Experience with Java based ORM frameworks such as **Hibernate**, **JPA**, **Spring Data**, **Spring IO**, **Spring Batch**, **Spring Security**.
- Used Spring Core Annotations for **Dependency Injection Spring DI** and **Spring MVC** for **REST API s** and **Spring Boot for micro-services**.
- Implemented **SOAP** and **REST Services** using Spring MVC and **JAX-RS** and developed unit test cases for REST endpoints using **Junit**, **Mockito** and **Spring Test**. To test web services **POSTMAN** is used.
- Developed applications using latest technologies like **EJB3.0**, **Spring2.x/3.x/4.x**, **Hibernate3.2/4.x**, **REST based Web services (axis2.0, JAX WS 2.0)**, **Rule Engines (Drools4.1, ILOG)** and **XML API**.
- Deployed **Spring Boot based micro services Docker container** using **Amazon EC2** container services.
- **Jira Development** for out of the box solution to extend functionality of **Jira** using **Atlassian SDK 8**.
- Used **Java hibernate**, **spring scanner**, **quartz scheduler**, **apache camel**, **Jira Rest API**.
- Developed **macros** for **confluence** to improve the internal user experience for documentation and reports.
- Implemented the back-end components of the application using **Spring Scanner framework**, integrated **Active Objects** ORM with the spring framework for object relational mappings and data management using **MySQL** database.
- Worked on **Lambda Expressions**, **Functional interfaces**, **Stream API's**, **Time API**, and **Improvements on Collection**, **Concurrency**, and **IO improvements** by using **Java 8**.
- Experience in UI framework **JQuery**, **JavaScript**, **HTML**, **DHTML**, **CSS**, **Ajax**, **AngularJS/Angular 2/4/8**, **Tag Libraries** and **custom tags**.
- Used **Angular 2/4/8** to create views to hook up models to the DOM and synchronize data with server as a Single Page Application (SPA).Used **Bootstrap** and **Angular2/4/8** to create Controllers to handle events triggered by clients and send request to server.
- Created responsive web pages using **JSF** and **Prime faces**. Created POC for different UI components using **Prime Faces** and resolved some technical problems like a Prime Faces component feature failing with **JPA** result set, or developers claiming some features working on their local workspace but not on the server.
- Experience in cloud Technologies like **Amazon Web Services**, **EC2**, **ELB**, **Auto-Scaling** and **S3** storage.

- Experience in Database modelling, design and development of **PL/SQL stored procedures**, packages in relational databases: **Oracle 10g / 11g** and **MySQL**.
- Strong experience with **MongoDB** development (reports, schema design, map reduce functions) and migrations from SQL relational databases to NoSQL databases like **MongoDB**.
- Experience in handling messaging services using **Apache Kafka, JMS** and **RabbitMQ**.
- Worked with **Apache Kafka** for High throughput for both publishing and subscribing, with disk structures that provide constant performance even with many terabytes of stored messages.
- Set up **Jenkins** server and build jobs to provide continuous automated and manual builds based on polling the **Git** source control system.
- Used **JBoss, Tomcat 7/8, WebSphere** for application development with **Eclipse 3.x, IntelliJ** and **STS**.
- Configured and maintained source code repositories in **Tortoise SVN** and **GitHub**.

TECHNICAL SKILLS

Java/J2EE Technologies	JSTL,JDBC,JMS,JNDI,RMI,EJB,GWT, Multithreading, Java Networking, Lambda Expressions.
Programming Languages	Java JDK1.6/1.7/1.8 and C.
Application/Web Servers	JBoss, Tomcat 7.x/8.0.x/8.5. x, WebSphere
Frameworks	Struts 2.x/1.x, Spring 3.x/ 4.x, Hibernate 3.x, Spring Boot 1.x/2.x, Spring Data (JPA,JDBC), Spring IO, Spring Batch, Spring Security, Spring Scanner, Atlassian SDK.
IDEs	Eclipse 3.x, IntelliJ and STS
Front end technologies	Angular JS/2/4/8, JSP, JavaScript, JSON, jQuery, AJAX, XML, HTML5, DHTML, CSS3, XHTML
Web Services	SOAP and REST.
Integration Tools	Apache camel
Messaging Services	Apache Kafka, JMS, RabbitMQ.
Methodologies	Agile/Scrum, TDD, WaterFall.
Testing tools	JUnit, Mockito, Selenium, Jasmine and Karma
Database Servers	Oracle 10g/11g, DB2, SQL Server, MySQL, MongoDB.
CI/CD Tools	Jenkins, Docker
Version Control	SVN, GitHub, Bitbucket.
Build Tools	Maven, Gradle.
Platforms	Windows 2008R2/2012, UNIX, Solaris, CentOS.

EDUCATION DETAILS

Masters of Science in Computer Science, University of Central Missouri, MO | 2018

Bachelor of Technology in Computer Science and Engineering, Jawaharlal Nehru Technological University, Kakinada | 2016

PROFESSIONAL EXPERIENCE

Client: Charter Communications

July 2020 - Present

Role: Software Engineer V

Description: Our team is Charter's custom software delivery team for the internal employees across Technology and beyond. We focus on these major areas: data extraction, add-ons, integrations, macros, dashboards, and reporting. The data is aggregated into an enterprise hierarchy of agile and non-agile work hierarchies (Programs, Portfolio Epics, Projects, Capabilities, Features, etc.) The data is then presented, via our custom application, to our business leaders to provide the ability to quickly make decisions and respond to portfolio performance. These applications, dashboards, and integrations create self-service experience that allows our customers the ability to create near-real time reports in a standard format.

Responsibilities:

- Involving in all the phases of Software Development Life Cycle (**SDLC**) like Gathering, analyzing, and validating Requirements, Design, Implementation, Testing, Deployment and Maintenance.
- Participating in all the ceremonies of **SAFe Agile** or **Scaled Agile** framework like Program Increment (PI) Planning, Sprint Planning, Daily Stand-up, Iteration Review, Retrospective and Backlog Grooming.
- Creating design workflows, flow charts, UML diagrams and virtual white boarding using **Lucidchart** and **Lucidspark** applications while participating in the ceremonies of SAFe Agile framework.
- Using **Jira Align** software for creating PI objectives with value according to the **Value Stream** based upon the functional requirements.
- Involving in the prioritization and delegation of tasks in the team to meet the SAFe value promised in PI objectives to deliver value across the **iterations**.
- Analyzing **dependencies** and **risks** in the architecture and discuss with both business and technical staff and define appropriate deadlines to deliver the product.
- Validating the functional requirements by analyzing the dependencies, technical limitations, and reusability to make functional requirements feasible.
- Using **Jira** application to create **Epic, Story** and **tasks** with description/summary, dependencies, effort estimations and acceptance criteria.
- Involved in **dependency meetings** with the other teams to discuss the dependencies and deadlines of the deliverables to resolve dependencies and prioritize PI objectives.
- Organizing **technical reviews** with the Architect and team members to address technical debt and resolve dependencies with other teams.
- Participating in solution designing with Solution Architect to validate the solutions for design flaws and Jira integration with external applications.
- Participating in **Iteration Reviews** and **System Demo's** with the Product Owner and Stake Holders to both demo my work and provide feedback to others work.
- Participating in code review meetings to ensure the code quality against company standards using the **SourceTree** and **KDiff3** applications to review, approve and merge code.
- Implementing and delivering the tasks for each iteration using Java 8 as primary language and using its features like **Collections**, **multithreading**, **Streams** and **Lambda expressions** to deliver efficient and foolproof code.
- Creating Jira plugins and Confluence addons using **Atlassian SDK**, **JAVA JDK**, **Jira Internal JAVA APIs**, and **REST APIs** to meet the business requirements.
- Managing includes create, modify, delete plugin data using **Active Objects framework** and using **Jira Rest APIs** to access and manipulate the data in Jira.
- Creating custom Rest Endpoints in Jira and Confluence plugins to provide data abstraction for external applications, such that produces only the data required using libraries like **Atlassian Rest Common**, **Http Components** and **Jackson mapper** to handle JSON requests and **responses**.
- Implementing Jira and Confluence plugins using **Atlassian Spring Scanner** library to manage **beans**, **data**, and **security**.
- Using Apache Velocity Templates framework to render values from plugin to UI and display the values in Jira and Confluence UI with the help of HTML, CSS, and JavaScript.
- Conducting performance and load tests for Jira and Confluence plugins by developing a script using JavaScript and using these scripts to simulate an environment where lot of users tries to access these plugins and captured all the metrics using **Java Visual VM (jvisualvm)**.
- Using **Atlassian BitBucket** application for Source code management and version control.

- Implemented logging using Apache Log4j and used **Splunk** application to access the logs.
- Assisting **DevOps** and **Testing** team in feature release to production by validating the logs and resolving any issues while post release testing.
- Maintaining and creating **documentation** for all designing, development and discussions in **Atlassian Confluence** using macros like HTML Macros, Jira Field Data Macro(Internal), Number Macro etc.

Client: CenturyLink INC., Littleton CO

July 2018– July 2020

Role: Java Full Stack Developer

Description: 3flow is a high availability VoIP order processing and workflow management application. It was created in 2004 and has remained in service to this day. It is the hub application connecting many smaller satellite applications (NUMS, Soprano, E911, LNP Gateway, TAI, NMSIS,ACT). It also interacts with other applications outside the voice team (PRO, NPAL, Billing, Mediation, EMP, STI). It originally handled wholesale products (ELS - 2042, LI - 2036) that were sold to wholesalers that resold to end users. It continues to handle wholesale but has added a new product (Voice Complete - 2025) for enterprise users. This is where one enterprise customer may have the need for many VoIP lines in one location or multiple locations. Voice is a migration project of 3Flow. 3Flow is monolithic project and now we are migrating it to microservices. Apart from migration, enhancements are developed for both projects in parallel.

Responsibilities:

- Involved in the Design and Development of project modules, gather requirements, analyze, and implemented business logic using **Agile/Scrum** Software Development methodology.
- Developed **Java 8** code from legacy **COBOL** code by deriving requirements from legacy functionality.
- Participated in reviews, Steel thread testing, demos and design meetings for implementing many new functionalities in addition to legacy functionalities.
- Used **Java 8** features like **lambda expressions** for communicating between business layer and database, **stream API** for Bulk Data Operations on **Collections** using both streams and parallel streams.
- Implementing the Microservices architecture with **Spring Boot** based Microservices interacting through a combination of **RESTful** and **Apache Kafka** message brokers.
- Worked on **Camel-based integration** middle-ware solution for Provisioning Services by design and the Implementation of business logic and data processing routes using **Apache Camel**.
- Implemented fail safe and **circuit breaker** patterns in **Spring Boot**, **Microservices** applications using **Hystrix**, configured **Swagger-UI** to registered Microservices with **Eureka server** and monitored service health check from **Spring Boot** admin console and **Spring Ribbon** for load balancing.
- Implemented pre-authentication and data base security using **Spring Security** and securing application access and **Spring Batch** for scheduling and maintenance of batch jobs.
- Implemented **Spring ORM** with **Hibernate** taking advantage of features like **Annotation** metadata, **Autowiring**, and **Collections** to implement **DAO** layer with Hibernate **Session Factory**, **HQL**, and **SQL**.
- Extensively used **Hibernate** concepts such as **Lazy loading**, **Dirty checking**, **Locking**, and **Transactions**.
- Defined and developed the application's presentation layer in UI development with technologies like **HTML 5**, **CSS3**, **JavaScript** and **Angular 2** and **Angular 8**.
- Used Angular 2 to structure JavaScript code in an MVC model (**Model-View-Controller**). Used D3JS to build a **single-page application** and used **Angular 8**, we created custom directives for re-usable components (multi-field form elements, background file uploads, etc.)
- Worked in all the modules of the application which involved **front-end presentation logic** developed using **JSTL**.
- Created/managed **Mongo DB/NoSQL** collections. Developed Server side automation using **Node.js** scripting and connecting different types of SQL and NoSQL databases.
- Experience with building **Docker Images** and running them on **Docker container**.
- Used **Drrools engine** for validating business rules before executing in runtime.
- Used **Jenkins** for code deploying by using plug-in to deploy to AWS. Experience with **DevOps** methodologies, implementing **CI/CD Pipelines** using tool sets like **GIT**, **Jenkins**, **Chef** and **AWS**.
- Contributes to policies, standards and procedures, and documentation of process improvements to continually streamline the **Identity and Access Management**.
- Worked with several testing frameworks such as **Junit** and **Mockito**
- Created **Test automation** framework using **Selenium** web driver.
- Used Microservices architecture with Spring Boot-based services interacting through **Apache Kafka**.
- Used **Git** for version control and **JIRA** for bug tracking, project management and **Maven** as build tool.

- Worked closely with QA team and fixed QA bugs as well as production issues with a quick turnaround time.

Environment: Java 8, Spring Boot, MVC, Spring Eureka, Hibernate, JSP 2.0, MongoDB, Node JS, AJAX, XML, Mongo DB, Docker, JQuery, Angular 2/Angular 4/Angular 8, JavaScript, IBM RAD, Kubernetes, Multi-threading, Agile, Design Patterns, Git, Apache Maven 2.5.1, Oracle WebLogic, HTML 5, XSLT, RESTful Services
